Media Release

MOLEKULIS JOINS CIRCULAR PV ALLIANCE AS CPVA FOUNDING MEMBER

Circular PV Alliance (CPVA) is proud to announce Molekulis Pty Ltd has joined CPVA as a Founding Member. This is a distinct collaboration that highlights the expanding interest CPVA's work is generating with a broad variety of renewable energy industry stakeholders.

Molekulis joins an esteemed and growing group of organisations pledging support to CPVA. PV Lab and Rainbow Power Company, both leaders in their respective fields within the renewable energy sector, have recently joined CPVA as Founding Members.

"Molekulis joining CPVA as a Founding Member is the strongest indicator to date that CPVA's work to promote a circular PV economy is becoming more relevant to an increasingly diverse stakeholder base," says Megan Jones, Co-Founder and Director at CPVA. "Molekulis' support will further broaden our audience and ramp up our ability to support the circular PV economy for the benefit of our industry, our environment and the Australian community at large."

Molekulis is a leading supplier of specialty base oils, process oils and transformer oils, and has been servicing the Australian and New Zealand manufacturing and energy sectors for over 27 years. Molekulis is committed to the quality of its products and services and their environmental integrity. While delighted to be part of the energy transition by supplying insulating oil to fill the transformers of dozens of solar farms across Australia, Molekulis Managing Director, Philippe Reboul has become increasingly aware of the looming challenge Australia will soon be facing with millions of solar PV panels that will be decommissioned with so far very limited end-of-life management options in place.

"It is something I have been thinking about for a while and when I heard Megan speak at the Electricity Engineers' Association conference in Christchurch earlier this year, I felt compelled to support CPVA in some way. I understand the time, commitment and energy it takes to build and grow a not-for-profit industry body and am pleased to help CPVA achieve its mission," says Reboul.

As CPVA Founding Members, Molekulis, PV Lab and Rainbow Power Company hold positions on the CPVA Technical and Strategic Advisory Board (TSA Board). The TSA Board will co-design best-practices, voluntary standards and industry tools to support industry stakeholders build a sustainable, thriving circular PV economy.

CPVA is a not-for-profit industry organisation, founded to support Australia's renewable energy and circular future for the benefit of our broader community. CPVA supports a united industry-led approach to enable the self-determination of various stakeholders in the emerging circular economy. CPVA partners with industry to undertake research to identify solutions and opportunities for the circular PV economy. Most recently CPVA and The University of Queensland released the [Reclaimed PV Panels Market Assessment Industry Report](#) which has received widespread national and international attention and resulted in CPVA being a Finalist in the 2023 Clean Energy Council Awards.

CPVA looks forward to working with Molekulis and drive innovation in the circular PV economy. CPVA Founding Membership is currently open. For more information, please visit www.circularpv.com.au/members
